- Includes one tile, attachment brackets and utility bezel(s) if applicable.
- Actual height is nominal height less .130"(3mm).
- Actual width is nominal width less .400"(10mm)
- Aligner/Light Blocks are required and separately specified based upon tile configuration; refer to Specification Guide.
- Tile type and height may be same or different on each side of frame.
- Tile may be located above the base raceway or Tile-to-Floor option may be specified to hide or cover the base raceway.
- Numerous tile combinations are allowed based on desired function and aesthetic. To determine vertical face dimensions:
  - –Full panel frame, non-raceway cover: frame height -2"(51mm)=vertical face available for individual tile height(s).
  - –Full panel frame, raceway cover: frame height -10"(254mm)=vertical face available for individual tile height(s).
  - –Individual tiles (face dimension) must be divisible by 8 to fill panel frame (vertical face available).
- **Technology Tiles (Fabric, Laminate, Steel, Wood, Slat):**
  - –For use with 3- or 4-circuit powered frame.
  - –18"(457mm)W tile not available with technology access.
  - –24"(610mm)W tiles available with single (left or right hand) technology access only.
  - –Technology Tiles may NOT span frames.
  - –The following power and communication items must be separately specified:
    - 3- or 4-circuit receptacle or receptacle blank cover (each side specified separately).
    - Data faceplate (field supplied) or data blank cover (VZAD-0000-R).
  - –Tiles must be placed at appropriate height to align with power access location.
    - Tile-to-floor with base raceway technology access is available in fabric only.
  - –Power can be routed horizontally at raceway, beltline and below worksurface locations. Routing power at below worksurface height requires it to be specified with a panel frame with below worksurface power and cutout
  - –A left-hand and right-hand Technology Tile may be specified for a back-to-back technology access application.
- **Tile-to-Floor Application (Fabric, Laminate, Steel, Wood, Markerboard, Slat):**
  - –8"(203mm)H tile may not be used in the bottom position.
  - –Concealed Base Feed may be used with Tile-to-Floor with Base Raceway Technology Access. When applied in front of a Concealed Base Feed, Tiles must be sized and applied in a way that allows easy removal for access to base feed. A receptacle location will be taken up by the Concealed Base Feed when in use.
- **In-Line Spanning Tile (Fabric, Laminate, Steel, Wood):**
  - –Tiles 36"(914mm)W and greater without technology access may span a maximum of two horizontally adjacent frames.
  - –Technology Access Tiles may NOT span frames.
  - –Opposite side of spanning tile may be same width as each frame or another spanning tile.
  - –Center attachment clips will require field relocation.
- **3-Way Intersection Spanning Tile (Fabric, Laminate, Steel, Wood):**
  - –The width equals the sum of two separately specified panel or stack frames plus 3"(76mm) for 3-Way panel intersection
  - –Opposite side of frames require separately specified tiles.
  - –Separately specified 3-Way Intersection - Spanning Tile Corner Blocks (VZCT-____-NS) are required.
  - –Separately specified spanning top trim is required; not for use with to trim same width as individual frames.

Tiles - Full Panel, Connections and Stack Frame

Fabric

Unique Features

- Fabric Tiles are tackable and provide acoustical value.
- High Acoustic option available; specified separately.
- **Tiles greater than 60"(1524mm)W, fabric will be railroaded (RR). Please refer to surfaces.haworth.com for available fabric and codes.**
- For aesthetic reasons, consider specifying tiles 60"(1524mm)W or less with railroaded fabric if located adjacent to a tile which requires railroaded fabric.

Notes: 72"(1829mm)W is not available in 64"(1626mm) and 72"(1829mm) tile height.

Specification Tips

- **Must be attached to a panel or face of a straight worksurface (exception: D-Shaped Ender).**
- **Worksurface support is specific to product line and worksurface edge guidelines; separately specified.**
- Convergent worksurfaces require floor support.
  Please select one of the following options:
  - –Worksurface support post or column
  - –Attached lower storage
- Knife edge requires use of worksurface supports for that application; worksurface support panel and/or side bracket for use with knife edge.
- Intermediate support is required for unsupported worksurface span greater than 60”(1524mm).

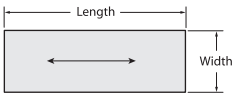

Note: Separately specified worksuface reinforcement bar provides additional support for worksurfaces with 60”(1524mm) spans that are heavily loaded and not otherwise supported by mid-span cantilevers, worksurface support panels, columns, legs or attached lower storage.
